## **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

Claims 1-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In each of the independent claims, an electrode has a "field amplifier structure", which is not clear. This is not a term of art known to describe electrodes. An amplifier is usually as active circuit which takes an input of some sort and produces an enlarged output. Applicant's specification describes electrodes "for amplifying a field strength of the electric field" (pages 4, lines 25-26), but no input electric field is identified. Is there some input electric field, which is output somehow in an amplified fashion? It seems to the examiner that the specification is describing passive structures, such as electrodes with points or tips, which could not possibly have active, or amplifying, properties. How would one know whether an electrode has a "field amplifier structure"? (Equivalently, how would one know if the claim is infringed?) Alternatively, what field is being amplified? (amplified compared to what?)

Also, in each of the independent claims, the "changeover material" is not clear.

Does this mean "changeover" in the sense that the materials can change over from one conductivity state to another? Or is this term intended to imply the more usual term "phase change material," to describe a material which changes its phase?

The following is a quotation of the first paragraph of 35 U.S.C. 112:

Application/Control Number: 10/522,386

Art Unit: 2811

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Page 3

Claims 1-24 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

As noted above, the specification does not appear to teach any method of building an amplifier into an electrode. The electrodes taught are all passive structures, and don't appear to amplify anything.

Ovshinsky is cited as an example of a prior art electrode having a tip, which creates a region of high electric field as applied to a phase change material at the tip.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Crane, whose telephone number is (571) 272-1652.

The supervisor for Art Unit 2811, Eddie Lee can be reached on (571) 272-1732. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
